

LEARN ABOUT YOUR BRAIN HEALTH

Cleveland Clinic Nevada and University of Nevada, Las Vegas are working together to study healthy brain aging and Alzheimer's disease. We are seeking volunteers from small Nevada communities to participate in an important nationwide study.

Together, we will learn more about Alzheimer's disease and ways we can improve brain health for you and your neighbors.

WHAT HAPPENS IN THIS STUDY?

If you are selected, you will meet with our research team in person at our facility in Las Vegas to learn more about your brain health.

We will evaluate your brain health annually until the completion of the study. Evaluations include pictures of your brain, blood tests, and tests of memory function. Some tests are optional.

A stipend will be provided as a courtesy for participation.

WANT TO HELP?

We need people without any memory issues and people who have memory problems, including Alzheimer's disease and mild cognitive impairment. You can participate if you:

- Are 55 years of age or older.
- Have at least 8 years of education.
- Can identify and secure a study partner (someone who knows you well and can attend clinic visits with you).
- Have fluency in English.
- Are willing and able to undergo testing in person in Las Vegas. This may take 6-8 hours to complete.
- Have not sustained a head injury or experienced a stroke or brain tumor.
